

#### 1 Overview

T5UID1 is DGUS II software platform based on T5 CPU, it is design for low resolution UI application.

#### Features:

- (1) Dual core T5 CPU, GUI core and OS core both run at 250MHz and power consumption is extremely low.
- (2) 128Mbytes NAND Flash, 64Mbytes for picture memory, which can store 250 pictures of 480\*272 resolution (full screen).
- (3) Font memory is 64Mbytes, font file and audio file share the back half (32 Mbytes) of Font Space.
- (4) 256×2.048 seconds 32KHz 16bit WAV audio player.
- (5) 320Kbytes Nor Flash for user database.
- (6) 128Kbytes variables space.
- (7) Support upgrade of font, audio, icon and other software.
- (8) Support JPEG image decompression and upgrade.
- (9) 255 display variables per user interface at most.
- (10) Support standard T5 DWIN OS platform and hardware customization. Interface of 20 IO, 6 UART, several AD and PWM can be expanded on hardware.
- (11) 40mS DGUS operating cycle, user interface effect is extremely fluent.
- (12) Display variables can be turned on/off or modified to realize complicated display effect.
- (13) Touch controls can be turned on/off or modified to realize complicated touch effect.
- (14) Download files and configure hardware through SD card. The downloaded files will be counted and displayed for file check. The downloaded files can be encrypted.
- (15) Support adjustment of capacitive touch panel responsiveness, which make the thickness of front toughened glass is up to 6 mm.

# **2 Function List**

### 2.1 Display Control

	1 0	Control	D. J. J. J.	
No.	Function	Function	Data length	Description
	code		(Word)	
				Icon display is related with a variable. When variable changes, icon switches accordingly. This
1	1 0x00	Variable Icon	1	function is used for dashboard, progress bar, etc.
				Support superposition of background and transparency set.
				3 icon status corresponding to a variable: no display, display selected icon, animation icon.
2	0x01	Animation Icon	2	This function is used for alarm, etc.
				Support superposition of background and transparency set. Support animation speed set.
				Slider icon is related with a variable. This function is used for display liquid level, dial,
3	0x02	Slider Icon	1	progress bar.
				Support superposition of background and transparency set.
4	0x03	Word Art	1/2/4	Use word art icon to display data.
				Support superposition of background and transparency set
5	0x04	Image Animation	none	Auto play an image sequence at selected speed. This function is used in welcome page or
				screensaver.
6	0x05	Rotation Icon	1	Transform variable range to angle data which linear with variable. Then display icon at
				corresponding angle. This function is mainly used for dashboard.
7	0x06	Bit Variable Icon	3	Every bit (0/1) of one variable data stands a status, and the status can be displayed via static
				icon or animation. This function is used to display on/off state.
8	0x10	Variable Data	1/2/4	Display a variable in specified format (integer, decimal, unit, etc), font type, and font size.
9	0x11	Text	2K at most	Display character string in specified format (font library) at selected area.
10	0x12_00	Digital RTC	none	Display digital RTC in customized format.
11	0x12_01	Analog Clock	none	Display analog clock via rotation icon.
		5 Data Window		Display variable data sequence in specified window, highlight the selected data.
12	0x15		2	Combined this function with sliding adjustment or increment adjustment, data sequence can
				scroll with finger touch. The scrolling speed can be controlled via DWIN OS.
				The variable occupy 2 word space, (VP+1) space is reserved.
13	0x20	Dynamic Trend Curve	2K per channel	Display real-time curve via data from curve buffer (auto match). The display area, central axis
		,	1	coordinates, display scale (zoom in/out), and curve direction of curve can be set.
14	0x21_01	Draw_Dot		Dot set (x, y, color)
15	0x21_02	Draw_Line		Draw a line via dot connection (color, (x0, y0),, (xn, yn))
16	0x21_03	Draw_Rectangle		Draw a rectangle. Color/area/size can be set.
17	0x21_04	Draw_ Fill Rectangle Area		Filling specified rectangle area with color. Color, area, size can be set.
18	0x21_05	Draw_Circle		Display entire arc. Color, area, size can be set.
19	0x21_06	Draw_Picture Copy&Paste	User define	Copy a picture area and display it on current page.
20	0x21_07	Draw_Icon Display		Icon display. Icon library is optional.
21	0x21_09	Draw_ Frequency Spectrum		Display frequency spectrum (vertical line), line color and location can be set.
22	0x21_0A	Draw_Segment		Connect line segments. Endpoint and color can be set.
23	0x21_0B	Draw_Arc Display		Display arc. Radius, color and angle range can be set.
24	0x21_0D	Draw_XOR		Do XOR operation at selected rectangular area. Mainly used for highlight display.
25	0.24	7 0 11		Loop shift of specified area, move direction can be set. Used for simple dynamic effect of flow
25	0x24	Zone Scrolling	1	chart and progress bar. The variable is occupied by system, user operation is forbidden.
26	0x25	QR Code Display	259 at most	Display QR code according to specified data.

Ver2.1

27	0x26	Adjust brightness of selected area	1	Adjust the brightness of rectangular area to highlight or weaken background.
----	------	------------------------------------	---	--

#### Remarks:

- 1. For more detailed function instruction, please refer to Development Guide of DWIN DGUS.
- 2. VP is a pointer, which points to the storage location of user variable memory space.
- 3. User can set SP (stack pointer) in DGUS tool, thus the configuration of display control will be write in to user variable memory space that the SP pointing to. User can operate configuration of display control via UART or DWIN OS to combine multi-controls.

### 2.2 Touch Control

No.	Function Code	Function	Data Length (Word)	Description
01	00	Variable Data Input	1/2/4	Input integer, fixed-point decimal via touch panel. The inputted data will be saved to variable space that user define.  The transparency of popup keyboard can be set.
02	01	Popup Window	1	Touch to active a popup window, return menu item key code of the window.  The transparency of popup window can be set.
03	02	Incremental  Adjustment	1	Touch button to do add/minus with variables. The adjustment step and range can be set.  Set adjustment from 0 to 1 circularly, user can get the checkbox effect.
04	03	Slide Adjustment	1	Slide to adjust variable data. The adjustment range can be set.
05	05	Return Key Value	1	Return key code when touch the button on touch panel and write key code in variable space that VP point to. Support bit variable return.
06	06	Text Input	127 at most	Input ASCII character or GBK Chinese character, support cursor and edit during input process.  (VP-1) space is reserved to save input status and inputted data length.
07	08	Return data based on touch status	User define	Return data to space that VP pointing to, the rule between data and touch status is set forward.  Combining data auto-uploading function, the data can be returned to UART.
08	0A	Slide Adjust (gesture)	2	Adjust variable data based on slide range on X axis or Y axis within selected area.  Combining data window to realize rolling adjustment.  VP space is reserved, the data is saved in space that (VP+1) pointing to.
09	0В	Page Sliding (gesture)	None	Scrolling touch screen along X-axis to realize page scrolling.  The next page and scrolling area can be set. Display control will move along gesture.

#### Remarks:

- 1. Refer to  $DWIN\ DGUS\ Development\ Guide$  for detailed description.
- 2. Touch configuration file(13\*.BIN) can not be more than 32Kbytes.
- 3. The touch control interface is 0x00B0, user can operate touch control via UART or DWIN OS to nest or group functions.

#### 2.3 Serial Port Communication Protocol

UART 2 can be used for system debug, whose mode is fixed at 8N1. Baud rate can be set, data frame is consist of 5 parts.

Data Block	1	2	3	4	
Definition	Frame Header	Data length	Instruction	Data	CRC (optional)
Data Length	2	1	1	N	2
Description	0x5AA5	Command+data+CRC	0x80/0x81/0x82/0x83		
Example (without CRC)	5A A5	04	83	00 10 04	
Example (with CRC)	5A A5	06	83	00 10 04	25 A3

CRC checker can be turn on/off at 0x2C.6 in T5UID1.CFG.

#### Description of UART2 instruction:

Instruction	Data	Description
0x80	Send: Register Page (0x00-0x08) + Register Address(0x00-0xFF) + Data to write	Write data string into register.
0x80	Answer: 0x4F 0x4B	Answer of write instruction.
0x81	Send: Register Page( $0x00-0x08$ ) + Register Address ( $0x00-0xFF$ ) + Data Length to Read ( $0x01-0xFB$ )	Read data from register.
0x81	Answer:  Register Page (0x00-0x08) + Register Address (0x00-0xFF) + Data Length +  Data	Answer of read instruction.
0x82	Send: Start Address of SRAM (0x0000-0xFFFF) + Data to Write	0x1000-0xFFFF is for user use.
0x82	Answer: 0x4F 0x4B	Answer of write instruction.
0x83	Send: Start Address of SRAM (0x0000-0xFFFF) + Data Length to Read (0x01-0x7D)	Read data form SRAM.
UAOS	Answer: Start Address of SRAM + Data Length (word) + Data	Answer of read instruction.

#### Definition of Register page:

Register page ID Definition		Description	
0x00-0x07 Data Register		256 per group, R0-R255	
009	David Davidson	DR0-DR255	
0x08	Port Register	See 3.4 section of <i>DWIN OS development guide based on T5</i> for more.	

### 3 System Variable Interface

Data with same background color in table need to be update at the same time.

VP	Definition	Length (Word)	Description	
0x00	Device_ID	4	T5 CPU ID, each T5 CPU has an unique ID.	
0x04	System_Reset	2	0x55AA 5AA5=Reset T5; 0x55AA 5A5A=Reset system (including /RST_OUT pin output).	
			D3: write 0x5A to enable DWIN OS once (write into 1MB Nor Flash), clear after operation.	
0x06	OS_Update_CMD	2	D2: Fixed at 0x10. DWIN OS program must start from 0x1000.	
			D1:0: Start address of SRAM to save program to update, it must be even.	
			D7: Mode. 0x5A=read 0xA5=write, clear after operation.	
0x08	NOR_FLASH_RW	4	D6:4: Start address of Nor Flash. Must be even. 0x000000-0x02:7FFE, 160KWords.	
0.00	_CMD		D3:2: Start address of SRAM. Must be even.	
			D1:0: Data length to read/write. Must be even. (Unit: word)	
0x0C	Reserved	3		
0x0F	Ver	1	Application software version. D1 stands for GUI version, D0 stands for DWIN OS version.	
			D7=Year (0-0x63) D6=month(0-0x0C), D5=day(0-0x1F), D4=week(0-0x6), D3=hour(0-0x17),	
0x10	RTC	4	D2=minute(0-0x3B), D1=second(0-0x3B), D0 undefined. Data format is HEX.	
			If there is no RTC on hardware, user can write RTC data.	
0x14	PIC_Now	1	Display current page ID	
0x15	GUI_Status	1	GUI status feedback: 0x0000=free, 0x0001=processing 13.bin and 14.bin.	
	TP_Status	4	D7: 0x5A=touch screen data is updated, OS is clear.	
0x16			D6: Touch panel status. 0x00=release, 0x01=first press, 0x02=lift, 0x03=pressing	
			D5:D4=X coordinate D3:D2=Y coordinate D1:D0=0x0000.	
0x1A-0x2F	Reserved	22	Undefined	
0x30	VCC_Now	1	Current 3.3V Voltage AD value, Voltage=AD value*4800/65532 mV.	
0x31	LED_Now	1	D1: 0x5A = VCC_Now, backlight brightness value, AD0-AD1 instant value has updated.	
0.001	LED_1\0\		D0: Current backlight brightness value, 0x00-0x64.	
	AD0-AD3		Instantaneous value of AD0-AD3, 1 word per AD. Voltage=AD value*4800/65532 mV.	
0x32	Instantaneous	4	Hardware support is needed.	
	value			
0x36	AD compute	1	D0=0x5A means temperature data and AD0-AD7 compute data is updated. Clear OS.	
0.100	update mark		Hardware support is needed.	
0x37	T_Core	1	CPU core temperature, temperature=T_Core*240/929. Unit: 0.1°C (+/-0.1°C).	
			16-bit AD compute value of AD0-AD7, reference voltage is 4800mA.	
0x38	AD0-AD7	16	2 words for each AD channel, high word is average value (DC component), low word is root	
VACO	compute value	10	mean square value (AC component). Sample rate is 5 KSPS, compute based on 256 sample	
			data.	
			Decode data of IRDA interface, need IRDA hardware.	
			D7: 0x5A=IRDA key code is updated, clear after OS read the data.	
0x48	IRDA_Data	4	D6: Button mode, $0x01$ = first press, $0x02$ =long press	
			D5:2: 4 bytes remoter decode data.	
			D1:D0: Count remote single, 0x0000-0xFFFF (cycle).	
0x4C-0x7B	Reserved	46	Undefined.	

0x7C	Folder Name	4	8 ASCII characters at most, like DWIN_SET. Read only.	
			D3: Undefined, write 0x00.	
			D2: Touch panel sensitivity configuration, read only.	
			D1: Touch panel mode configuration, read only.	
			D0: Set system status.	
			.7: Reserved, write 0.	
0x80	System_Config	2	.6: Display control number. 0=64 control/page, 1=128 control/page, read only.	
			.5: Loading 22.bin to initialize SRAM. 1=Load 0=Not load, read only.	
			.4: SD port status. 1=On 0=Ban, read and write.	
			.3: Touch tone control. 1=On 0=Off, read and write.	
			.2: Standby backlight control. 1=On 0=Off, read and write.	
			.10: display direction 00=0° 01=90° 10=180° 11=270°, read and write.	
			Set standby backlight.	
002	LED Confin	2	D3= brightness when system running, 0x00-0x64; When backlight standby control is off, D3	
0x82	LED_Config	2	can be used for brightness adjustment via instruction.	
			D2= brightness when system standby, 0x00-0x64; D1:0=wait time /5mS.	
		2	D3: 0x5A = enable page operation once, clear after CPU operation.	
	PIC_Set		D2: Mode.	
0x84			0x01=page switch (display the selected picture).	
			0x02=save page (save background of current page to picture memory).	
			D1:D0: picture ID.	
		4	D7= write 0x5A to enable PWM1 setting once, clear after operation. D6= division factor,	
0x86	PWM1_Set		D5:D4= PWM1 accuracy, PWM1 carrier frequency =501.35MHz/(division factor*PWM1	
			accuracy). D3:D0 reserved.	
0x8A	PWM2_Set	4	Set PWM2.	
0x8E	PWM3_Set	4	Set PWM3	
0x92	PWM1_Out	1	D1:D0=PWM1 output high level width, 0x0000-PWM1 accuracy. Need hardware support.	
0x93	PWM2_Out	1	D1:D0=PWM2 output high level width, 0x0000-PWM2 accuracy. Need hardware support.	
0x94	PWM3_Out	1	D1:D0=PWM3 output high level width, 0x0000-PWM3 accuracy. Need hardware support.	
0x95	PWMV1 Out	1	D1:D0=PWMV1 output ratio, 0x0000-0x3E8, output is synchronous with 50Hz pin input pulse.	
0.393	F WM V I_Out		Need hardware support.	
0x96	PWMV2 Out	1	D1:D0=PWMV2 output ratio, 0x0000-0x3E8, output is synchronous with 50Hz pin input pulse.	
0.00	F WWI V Z_Out	1	Need hardware support.	
0x97-0x9B	Reserved	5	Undefined	
			D7:D6= write 0x5AA5 to enable RTC setting once; D5:D0=year, month, day, hour, minute,	
0x9C	RTC_Set	4	second, all in HEX format.	
			Need hardware support.	
			Music player setting:	
			D3: Starting section of music to play, 0x00-0xFF.	
			D2: Section number, 0x01-0xFF. Clear after DGUS operation. Under buzzer mode, it is buzz	
0xA0	Music_Play_Set	2	time, unit: 8 mS.	
			D1: Volume, unit: 1/256.	
			D0: Return the rest section numbers of music to play, 0x00-0xFF.	
			D3:D2 both write 0x00 to stop music playing.	

Ver2.1

0xA2	0xA2     BMP_Download     4       0xA6     JPEG_Download     4       0xAA     Nand Flash_RW_CMD     6		D7: 0x5A = enable once writing data in SRAM to picture buffer.  D6:D5: Starting address of SRAM, must be even.  D4:D3: Data length, unit: word. Must be even.	
0xA6			D2:D1:D0: Picture buffer address, 0x000000-0x0257FF, 150Kwords.  D7: 0x5A = enable JPEG picture/icon download operation once, clear after CPU operation.  D6: download mode  0x01=Display JPEG picture on current page. (it will be covered when switch page).  0x02=Save JPEG picture to picture memory. (Operating backstage).  D5:D4: starting address of SRAM to save JPEG file, must be even. 64Kbytes per JPEG file at most.  D3:D0:  0x01 mode: D3:D2= top left corner coordinate of picture displayed on background.  0x02 mode: D3:D2= picture ID, 0x0000-0x00F0.  The resolution of JPEG picture must not exceed screen resolution, set coordinate as 0° display. (for 90° display, users need to rotate picture and coordinate in advance.)	
0xAA			D11: 0x5A= enable once read/write font library (64Mbytes) operation, clear after operation. D10: operation mode, 0x01= read font library, 0x02=update font library.  When D10=0x01 D9: font ID, 0x40-0x7F, 256Kwords per font, 16Mbytes at most. D8:D6: starting address in font, unit: word. 0x00 00 00-0x01 FF FF. D5:D4: starting address of SRAM to write data, must be even. D3:D2: data length to read, unit: word. Must be even. D1:D0: undefined, write 0x00.  When D10=0x02 Update font file (font library, icon, audio), 32Kbytes once. D9:D8 address of 32Kbytes font file, 0x0000-0x07FF, refer to the entire 64Mbytes font memory. D7:D6: starting address of SRAM to save updating data, must be even. D5:D4: fixed 0x0001. D3:D0: undefined, write 0x00.	
0xB0	Touch Control interface 36		0xB0: 0x5AA5= enable accessing touch control interface once. Clear after CPU operation. 0xB1: Page ID of touch control. 0xB2: High byte: touch control ID (set in DGUS II development software), 0x00-0xFF;  Low byte: touch control code, 0x00-0x7F. 0xB3: Access mode 0xB4-0xD3: data to modify of mode 0x02, 0x03. Mode 0x0000: turn off this touch control. Mode 0x00001: turn on this touch control. Mode 0x00002: Read this touch control and write it to SRAM that 0xB4 pointing to. Mode 0x0003: update current touch control with data that 0xB4 pointing to, the format and data length must be the same.	
0xD4	Simulate touch panel operation	0xD4: 0x5AA5=enable the operation once, clear after operation. 0xD5: press mode. 0x0001=press, 0x0002=release, 0x0003=keep pressing, 0x004		

			0xD7: Y coordinate of press position.
			After simulating mode 0x0001 and 0x0003, must simulate 0x0002.
			(x,y) coordinate of TP must be set as $0^{\circ}$ , CPU will auto-rotate coordinate.
0xD8-0xFF	Reserved	40	Undefined.
0x100-0x2FF	Reserved	512	
0x300-0x37F	Dynamic curve interface	128	0x300-0x30F: feedback 8 channel of curve buffer (read only), 2 words per channel.  High word: pointer of data (0x0000-0x07FF);  Low word: data length of curve buffer (0x0000-0x0800). Write 0x0000 to hide curve.  0x310-0x311: enable writing curve buffer.  D3:D2: 0x5AA5= enable writing curve buffer, clear after operation.  D1: The number of data block, 0x01-0x08.  D0: Undefined, write 0x00.  0x312-0x37F: The data block to send to curve buffer, 16bit unsigned number.  Single data block defines as channel ID (0x00-0x07)+data word length(0x01-0x6E)+data.  After adopting dynamic curve displaying, from 0x1000, setting data buffer for each curve, as per 2Kwords aisle.  While dynamic curve display is enabled, data buffer is start from 0x1000, and 2Kwords every buffer. CHO buffer is 0x1000-0x17FF, CH1 buffer is 0x1800-0x1FFF, etc. Free buffer can be used for user variable area. User can also rewrite curve buffer data, then modify pointer and data length in 0x300-0x30F to make sure the curve display right.
0x380-0xFFF	Reserved	3K	Undefined

0x1000-0xFFFF SRAM is for user use.

#### **4 SD Interface**

Download and update file via SD/SDHC interface is support.

File Type	Name rule	Description
Сово Виодиом	T5UID1*.BIN	The GUI core program.
Core Program	T5OS_V*.BIN	Common T5 OS platform core program.
DWIN OS program	DWINOS*.BIN	DWIN OS program, code must begin from 0x1000.
		Each ID points to 2KWords memory, ID range is 0-79.
NOR Flash database	ID+(Optional) file name.LIB	The NOR Flash is inserted in T5 CPU, 160KWords. It can be used
		save user data or DWIN OS program.
Font Library	ID+(Optional)file name.BIN/HZK/DZK	Generate by font generator.
DGUS Input File	12*.BIN	Save at fixed 12# font space.
DGUS touch File	13*.BIN	Save at fixed 13# font space, 32Kbytes at most.
DGUS variable File	14*.BIN	Save at fixed 14-17# font space
DGUS variable initialize file	22*.BIN	Save at fixed 22# font space, load data in 0x2000-0x1FFF address to
DGUS variable illitialize life	ZZ".DIIN	initialize 0x1000-0xFFFF SRAM.
Icon file	ID+(optional)file name.ICO	Generate by DGUS tool. Save in font space.
Audio file	ID+(optional)file name.WAV	32KHz 16bit WAV format. Save in audio space.
BMP image file	ID+(optional)file name .BMP	24bit true color format.
Hardware Configuration File	T5UID1*.CFG	

64Mbytes font memory, font memory block is 256KB.

32Mbytes audio memory, audio memory block 128KB.

Audio memory covers last half font memory (128 blocks), each audio memory block covers half font memory block.

All the file must be put into **DWIN\_SET** folder, and the folder must be set in SD card root directory. SD card must be 4KB sectors, FAT32 format.

When power up, DGUS check SD interface once, then check SD interface every 3 seconds.

## **5 Hardware Configuration File**

T5UID1.CFG is hardware configuration file for T5UID1 platform. T5UID1 is binary, it can be edit by UltraEdit.

Туре	Address	Length	Definition	Description
<b>Identification Code</b>	0x00	4	0x54 0x35 0x44 0x31	Fixed content.
Format Flash	0x04	2		Write 0x5AA5 to format NAND Flash.
System Clock Calibration	0x06	2		0x06: write 0x5A to enable system clock calibration 0x07: write 0xA5 is UART calibration mode. During the calibration process, set UART2 as 115200bps and 8N1 mode, send more than 30 0x55 data packages every 30 mS.  Write 0xAA is RTC calibration mode. Apply the RTC hardware to calibrate. It is already be calibrated before sale.
System Configuration 1	0x08	1	System_Config1 (default value is 0x38)	.7: data auto-uploading. 0=On, 1=Off6: display control number. 0=64 control/page, 1=128 control/page5: initialize via 22.bin file. 1=On 0=Off .4: SD interface status. 1=on 0=ban .3: touch tone. 1=on 0=off .2: backlight system standby control. 1=on 0=off .10: display direction 00=0° 01=90° 10=180° 11=270°
	0x09	2	UART2 Baud Rate	Baud rate set value=7833600/real Baud rate.  115200bps, set value=0x0044. Ser value is 0x03E7 at most.
	0x0B	1	LED_Set_En	0x5A=enable standby backlight.
Standby Backlight	0x0C	4	LED_Idle_Set	0x0C=brightness when TP is used, 0x0D=brightness when TP is not used. 0x0E:0F=waiting time, unit: 5mS.
	0x10	2	Display_Config_En	0x5AA5=enable LCD configuration. Not for user.
	0x12	1	PCLK_PHS	Data latch phase: 0x00=PCLK Falling edge, 0x01=PCLK Rising edge
	0x13	1	PCLK_DIV	Pixels clock PCLK frequency set , PCLK frequency (MHz)=500/PCLK_DIV.
	0x14	1	H_W

### **Revision Record**

Date	Content	Software Version
2017.06.13	Publishing at the first time.	V1.0
2017.09.02	Add UART2 data auto-update by touch.	V1.1
	User need to edit T5UID1.CFG to 0x0008.7=1, touch control code is 0xFE**, and update	
	T5 OS to V1.2 or above.	
2017.09.23	Add real-time update of JPEG icon.	V1.1
2017.10.13	Add ASCII input function.	V1.2
2017.12.01	Add sensitivity modification of capacitive touch screen. Set at 0x27-0x29 in T5UID1.CFG	V1.3
2017.12.18	Support 256 control/ page.	V1.4
	Support icon resolution over 255*255.	
	Add drawing instruction.	
2018.02.28	Add choose between audio player and buzzer.	V1.5
	ADD Chinese characters input (GBK code) via TP.	
	Add dynamic curve display.	
2018.03.10	Add sliding (gesture) page switch, and auto-upload page ID after switching.	V1.6
	Add touch control interface for on\off\read\edit.	
	Add brightness adjustment of selected area, this function can be used to highlight or fade	
	the area	
2018.04.08	Add UART2 CRC checker.	V2.0
	Add SD interface download file count and check.	
	Add modification of DWIN_SET folder name and encryption of entire program.	
	Add background transparency set of all icon.	
	Add icon animation speed adjustment.	
	Add transparency set of popup area.	
	Add touch simulation (0xD4) for process control and keyboard UI operation.	
2018.05.10	Add secondary hardware watch dog (WDT) choice.	V2.1
	Add real-time update of display content.
